# TalkBack Software

Software Specifications

Type: *For SmartReader Plus data loggers*

TalkBack software has two main features: (1) it automatically downloads logged information from any SmartReader Plus data logger and (2) it responds to SmartReader Plus alarms. TalkBack also works with SmartReader Plus data loggers that are on a local or remote network.

AUTO-BACKUP FEATURE

To automatically download information from a SmartReader Plus data logger, TalkBack will contact the logger (direct if local, by modem if remote), download the logger's information, and save it to the computer's hard drive at user-set intervals. This prevents manually backing up logged data when the logger's memory becomes full.

ALARM INDICATING FEATURE

TalkBack software can be set up to receive all tripped alarms from SmartReader Plus data loggers (initially set up in TrendReader® Standard software). When the data logger measures an exceeded value on any of its channels, the logger will call the computer and TalkBack will run an alarm macro, which has been set by you. Macro options include sounds, visual alarms, running of other programs, and calling a pager or cell phone with Caller ID capability.

Note: TalkBack software is only compatible with SmartReader Plus data loggers with a serial number of 42,508 or higher.

FEATURES

- Compatible with SmartReader Plus (SRP) data loggers
- Works with SRP networks (local or remote)
- Automatically downloads logged data
- Answers SRP alarms and will run a custom alarm macro
